EDUCATION

Sangmyung University *Seoul, Korea*
B.S. Candidate, Department of Game Design and Development *Expected Feb 2027*
Mar 2021–Present | GPA: 3.91/4.5

RESEARCH INTERESTS

Human-Computer Interaction; Haptic Interfaces; Physical Interaction; Games and XR

RESEARCH EXPERIENCE

Electronics and Telecommunications Research Institute (ETRI) *Jul–Aug 2026*
Summer 2026 Research Intern | Affective Computing Research Section | Daejeon, Korea

- Generative AI development support — Refined motion sequencing and spatial alignment for multi-actor 3D performance scenes.
- Technical rehearsal development support — Extended and tested stage lighting controls in Unreal Engine for live cueing and playback.

Haptics and Virtual Reality Lab, Kyung Hee University *Mar–Jun 2026*
Undergraduate Research Intern | Advisor: Prof. Seokhee Jeon

- Assembled the control circuitry for a haptic hand-bike training simulator and helped test the system in Unity and during a test ride.
- Developed a fingertip force-feedback device for playing a virtual Jenga game as an individual project.

PUBLICATIONS

Jin-soo Kim, Hae-Dong Kim, and Sang-Woo Seo. "Structure-Preserving Spatial Alignment of Independently Generated Motion Clips for Multi-Character Performance Scenes." *Proceedings of the 2026 KIICE Fall Conference*, vol. 30, no. 2, pp. 849–851. Online poster 57-01, Oct 23, 2026.

PROJECTS

PGI (Player-Game Interaction) Feedback System *Mar–Jun 2026*
[Individual project, Sangmyung University | Research intern, Kyung Hee University]

- Designed and built a wearable fingertip force-feedback prototype using dual-servo actuation and 3D printing; refined it through three hardware versions.
- Integrated MediaPipe hand tracking, Unity simulation, and Arduino servo control via UDP/serial links.

3D Action Game with Motion Input — Carrot Mart: Short-Term Horse Rider Wanted *Sep–Dec 2025*
[Interactive Game System Development | Sangmyung University]

- Developed two Arduino IMU controllers with threshold-based motion detection and BLE HID, mapping left-hand input to horse movement and right-hand input to lasso control in Unreal Engine.

PROJECTS (CONTINUED)

Turn-Based Strategy Game with Deck Building — FLIP SIDE *Dec 2025–Present*
[Capstone Design Project | Sangmyung University]
- Designed the game's interface and controls.
- Implemented battle interactions and audiovisual feedback in Unreal Engine.

Mobile AR Game with Card Recognition — Woochi: The Eyes *Sep–Dec 2025*
[Intelligent Mixed Reality | Sangmyung University]
- Designed the gameplay and narrative.
- Implemented touch interaction in a Unity/Vuforia AR game.

Multi-Theme RPG with a Portal Hub — GATCHA Adventure *Mar–Dec 2025*
[Game Software Development 2 / Advanced Game Software Development | Sangmyung University]
- Designed game levels.
- Implemented gameplay progression systems in Unreal Engine.

Detective Puzzle Game with Multiple Endings — Profiling Rendez-Vous *Sep–Dec 2024*
[Game Software Development 1 | Sangmyung University]
- Designed the game's case structure and narrative.

Runner Game — Newton: The Power of Apple *Mar–Jun 2024*
[Game Object-Oriented Programming | Sangmyung University]
- Designed gameplay and created pixel art in Aseprite.
- The team won the Grand Prize in the sophomore division of the departmental game development contest.

PATENTS *(both granted, no longer in force)*

Equipment For Informing Baby Danger | KR 10-2011267-0000 *Aug 2019*

Convenient Scoop | KR 10-1748325-0000 *Jun 2017*

SKILLS

Hardware prototyping: Arduino, sensor-actuator integration, Fusion 360, 3D printing
Software tools: Unreal Engine, Unity, MediaPipe, OpenCV
Programming languages: C, C++, C#, Python, R

AWARDS AND HONORS

Academic Excellence Scholarship | *Sangmyung University* *Feb 2026*

Grand Prize and Top Excellence Award *Jun 2024*
| *Departmental Game Development Contest, Sophomore Division* | *Sangmyung University*

Grand Prize, Creative Category | *International Robot Olympiad Korea* *Aug 2016*
